user, especially if he is visually impaired. Also for other reasons, there may be ~~[[is]]~~ a need for an audible version of the display.

~~The present invention solves this problem by transforming the information displayed to audible speech.~~

In the Abstract:

On new page 13 following the claims, please insert the following abstract:

Abstract

A control unit extracts at least a part of data that is displayed on a display and sends the extracted part of the displayed data to a speech generating device. The speech generating device includes a conversion circuit that converts the received data to a speech signal. The conversion circuit may be connected to a speaker system for broadcasting the speech signal.
